Productivity

Registered in October 2011 with a score of 108.5% of the control varieties in the Northern area of France, Hyteck is a medium maturing hybrid wheat that yields well, whether treated or untreated.

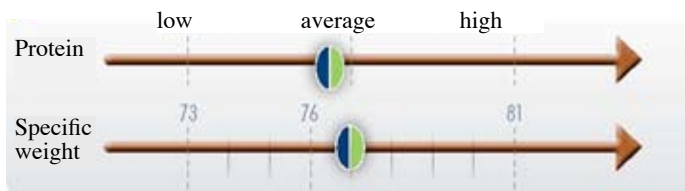

| CTPS results | Treated | Untreated |
|----------------|---------|-----------|
| 2010 | 106.1% | 109.2% |
| 2011 | 108.6% | 109.6% |
| Official Yield | 108.5% | |

French official trial

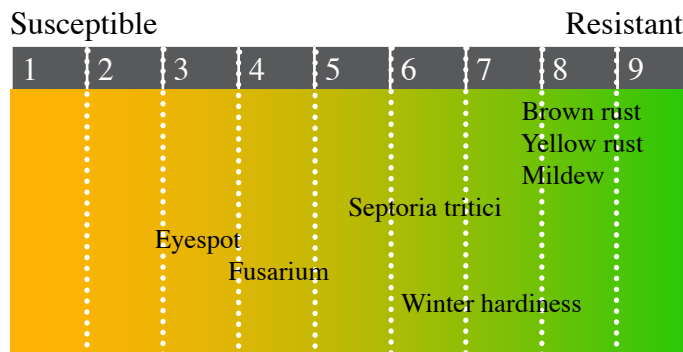

Quality and market

Soft wheat suitable for biscuits, distilling, export and other markets.

Agronomic profile

Hyteck offers excellent resistance against all foliar diseases (especially brown and yellow rusts, powdery mildew and septoria).

Planting advice

Refer to your Hybrid Wheat distributor for advice on drilling date and seed rate.

Growth regulation

Hyteck is fairly resistant to lodging but we advise a growth regulator if there is a high risk.

Fungicide programme

Hyteck's good resistance profile allows you to adapt your required foliar disease fungicide programme (rusts, septoria and powdery mildew), but adjust eyespot protection according to risk.

Weed management

Hyteck is chlorotoluron tolerant.
